There are 9 squares involved with the 7, so 480

$9 \times 480 = 471$ other squares. These other squares contain the 92 other mines. So the number of grids with a 7 at a particular spot is $8 \times 471 \times 92$. That is out of a total of $\binom{480}{99}$ different grids

probability of getting a 7 in Minesweeper - Math Stack Exchange : questions : probability-of-getting-a-7-in-mines...

casino online brasil gratis

We have $492556 = 125244$ ways for an easy grid to have an 8 somewhere. Out of the 1.88 trillion total easy grids, this gives a probability of about $\frac{1}{8}$. So, very rare indeed!

probability - How rare is it to get a R\$8\$ in minesweeper?
