you're out. It's actually the first thing that stood out when I was looking at the device. The Moonstone is still going strong with a friend of mine a year later.

If you've got an M8, that's about 3.5 charges. iPhone 6 it can charge about five times in a row, a 6 Plus about three times, an iPad Air 2 evidently just over one full charge. It's a very useful little tool.

The Poki also includes a touch-sensitive power display. While it's neat it doesn't always register my touch, but it does the job. It sort of reminds me of KITT from Knight Rider, or a Cylon, but not quite so cool.

The Poki also has a 10-LED power indicator. While I haven't paid close enough attention to the battery as it drains, it does appear that it's calibrated at least somewhat close, unlike other batteries that stay on 4 (full) and then drop to a blinking 1 about 12 seconds before the battery dies.

The Poki 10,000 mAh portable charger claims to be 100% compatible with all USB-based devices for charging, so as long as you've got a charger cable, or can use the MicroUSB cable that's evidently included, you should be set with any device.
